Reviews for Capstone Design I

Excellent guidance for final projects. ★★★★★
Collaborative and rewarding experience. ★★★★★

Reviews for Calculus I

The explanations were clear, and examples were helpful. ★★★★
Some concepts were difficult, but practice helped a lot. ★★★★

Please ensure that the test files follow the directory structure and naming conventions required by the framework. 😊 😊

Follow these, please.

1. Verify if the test files are placed in the expected directories based on the framework you are using.
2. Ensure that the test files and classes are named correctly so the framework can recognize them.
3. Check the framework's configuration to ensure it is set to recognize the locations and patterns of the test files.

Challenge

Challenges

node module conflict

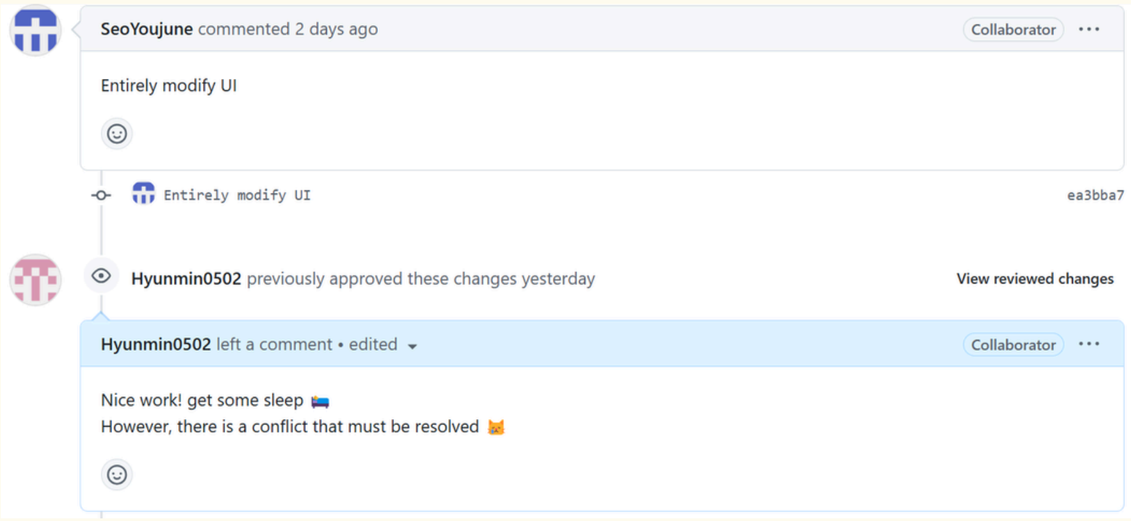

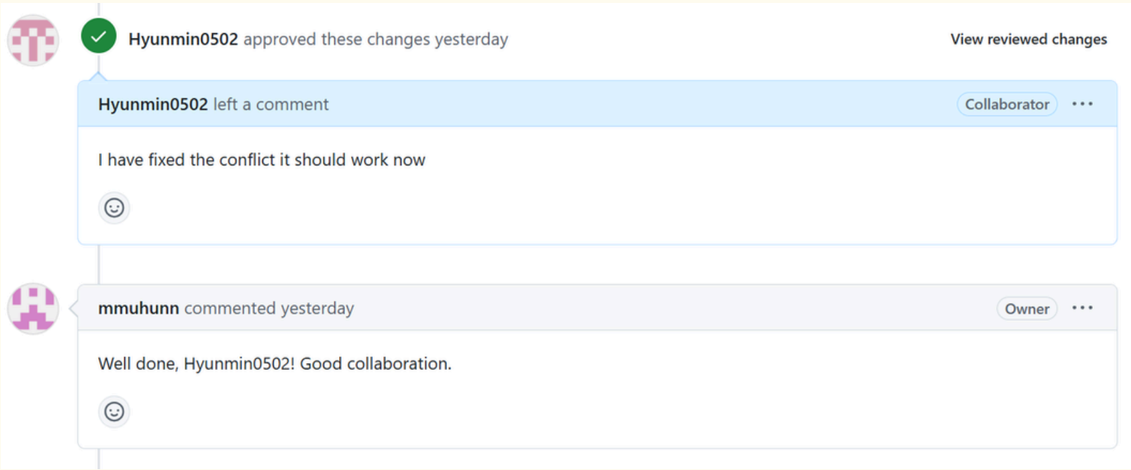

Challenges

Code conflict

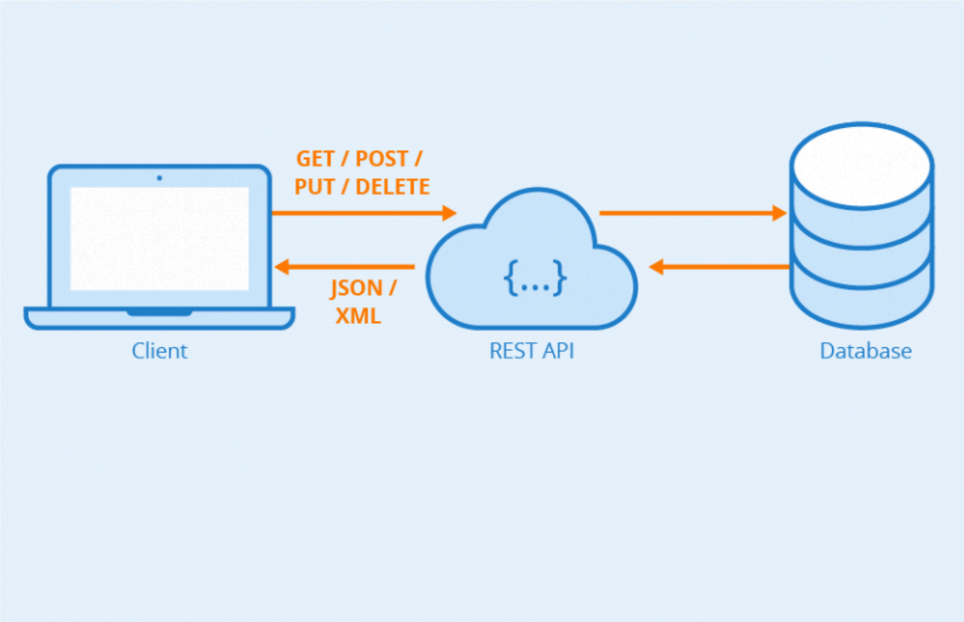

<Manual fixing>

Challenges

Frontend/Backend connection

Our Goal

Attempt to deliver **Spring Boot's backend server and React-developed frontend** **in the same application**

Challenges

Frontend/Backend connection

Problem

Develop front-end and back-end independently
:Lack of clear definition of data transmission and reception between the two sides

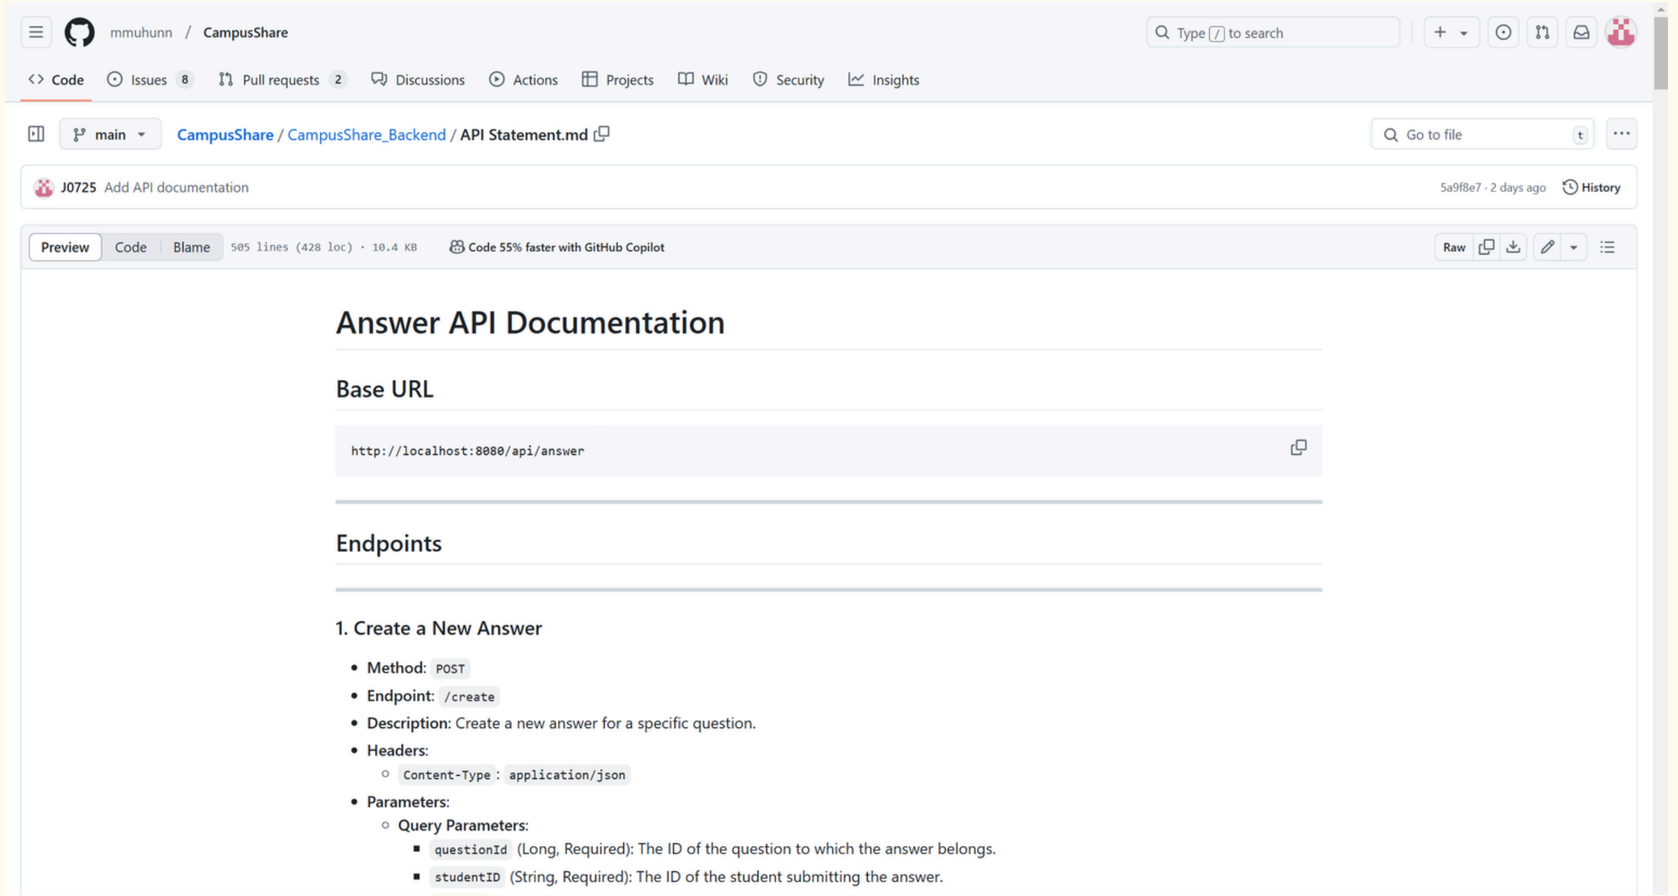

API Interface Inconsistency

Challenges

Frontend/Backend connection

Efforts to solve the connection problem

API Statement

mmuhunn / CampusShare

Type / to search

Answer API Documentation

Base URL

```
http://localhost:8080/api/answer
```

Endpoints

1. Create a New Answer

- **Method:** `POST`
- **Endpoint:** `/create`
- **Description:** Create a new answer for a specific question.
- **Headers:**
  - `Content-Type` : `application/json`
- **Parameters:**
  - **Query Parameters:**
    - `questionId` (Long, Required): The ID of the question to which the answer belongs.
    - `studentID` (String, Required): The ID of the student submitting the answer.

Challenges

Frontend/Backend connection

Lesson

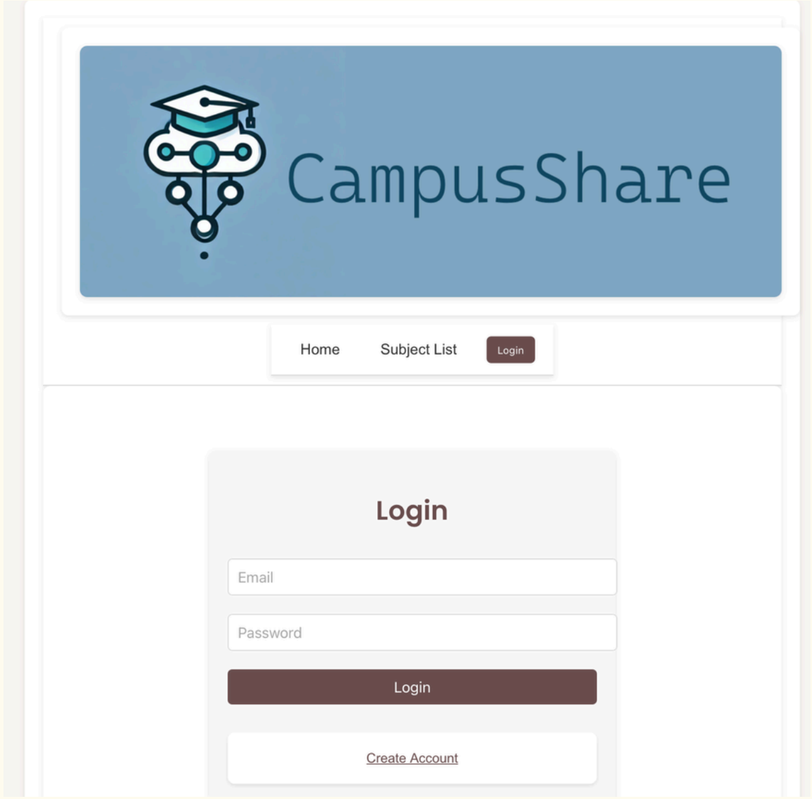

the importance of API Statement
=> **Clear specification of the API's data format** that the backend should provide

The importance of **communication between the front and backend development teams** in the early stages of development

Challenges

Introduction of enrollment certification

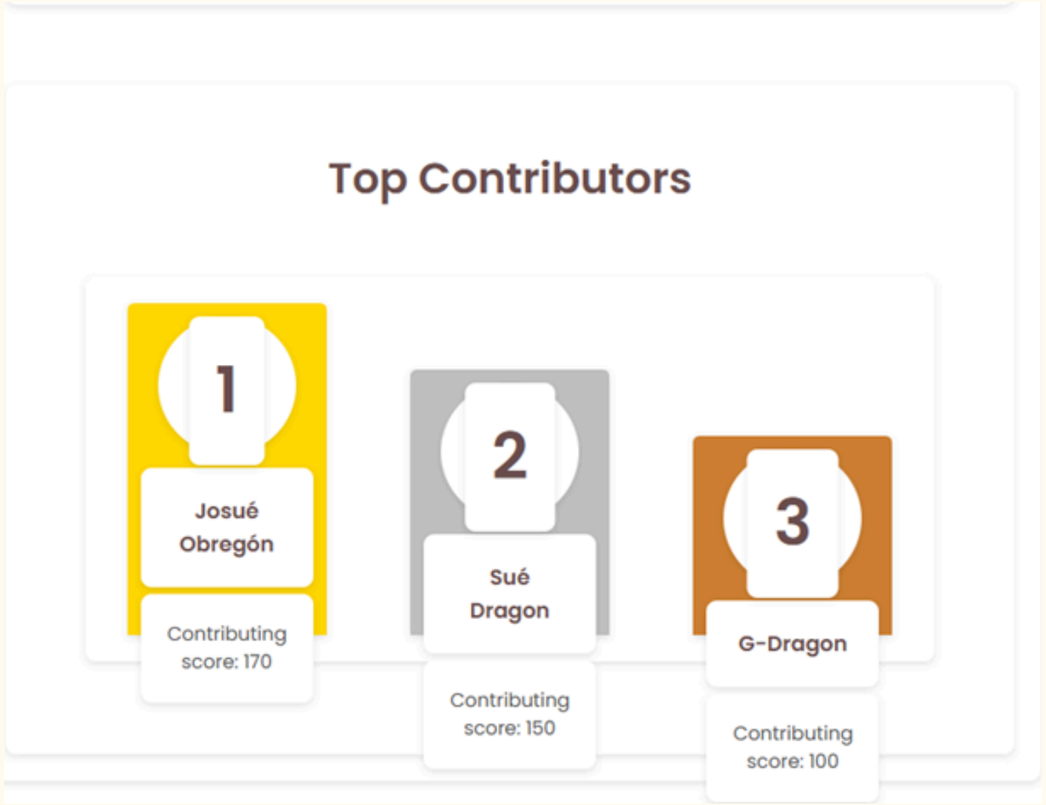

Process Flow: "Create Account → login → email authentication → access allowed"

Regarding the login, the enrollment authentication function will be added so that only actual school students can use the bulletin board.

Challenges

Improvements: Database Interworking

Database Interworking →
Automatic aggregation of users with high contribution

It tries to increase the contribution of users by specifying users with high contributions by connecting databases.

Current situation: Ranking feature only at the front end

New skills acquired

New skills acquired

Frontend

Backend

Unit test/CI pipeline

Work Collaboratively (Open Source)

Conclusion

conclusion

Current Community Scope

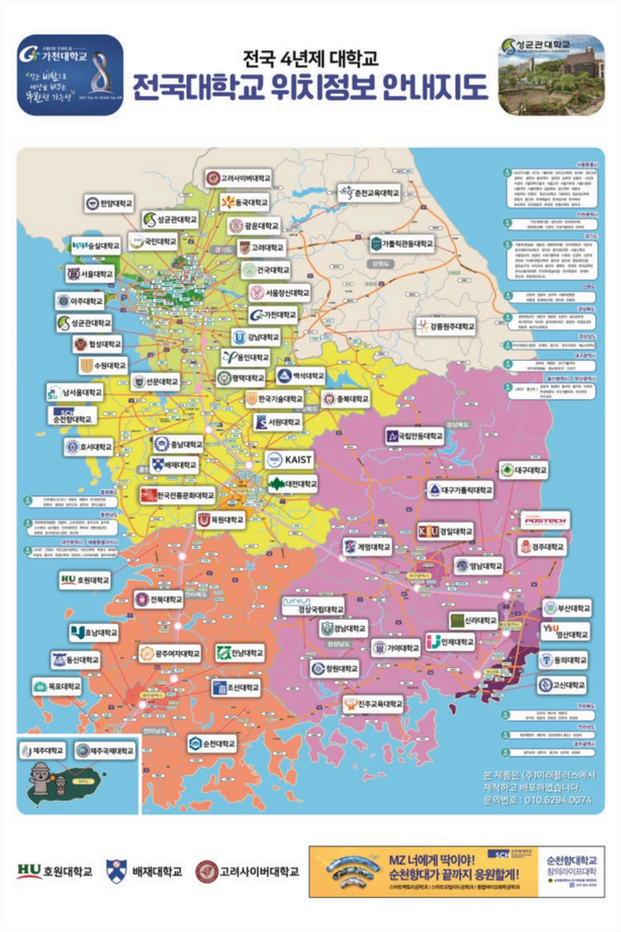

Target: ITM major student at Seoul National University of Science and Technology

Goal: Web service operation centered on sharing study materials and knowledge

conclusion

Expanding the Scope

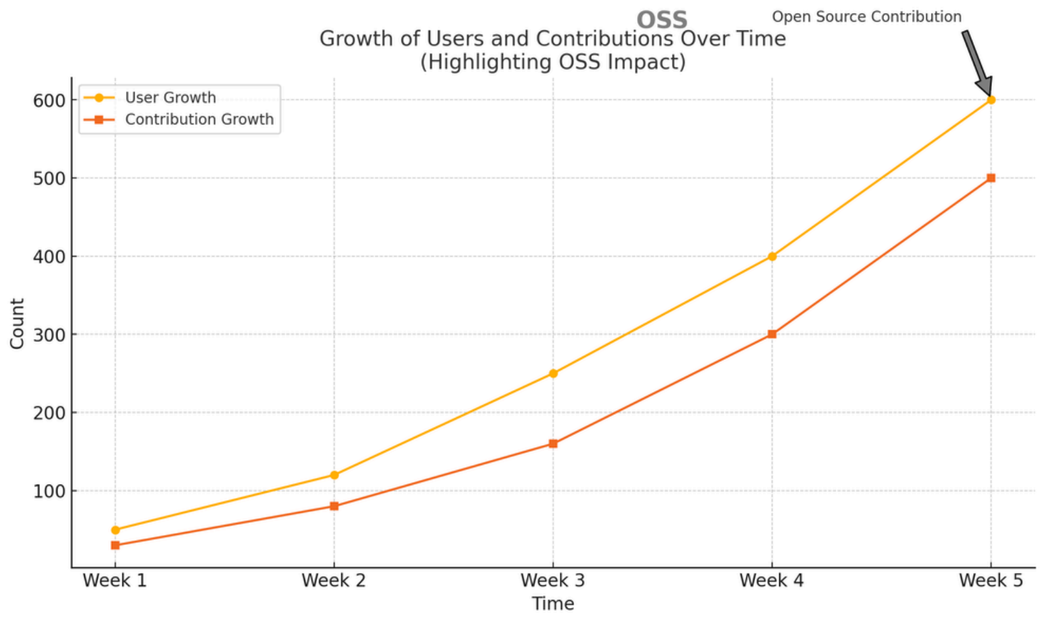

expand the scope to create a community suitable not only for ITM of Seoul National University of Science and Technology, but also for all majors of the university, and even all schools in Korea.

considering a direction to induce students from each school to create a web study material sharing community through the promotion of competition by school.

conclusion

Expected effect of expansion plan

Communities Growing With Open Source

Synergy between schools：Utilize OSS to promote collaboration and data sharing between schools, encourage students to become accustomed to open-source culture and contribute better materials jointly.

Expanding the community：Various schools and students participate as contributors, which expands and activates the open-source ecosystem.

Sustainable growth：The OSS-based community is open to anyone based on transparency and openness, making it possible for students of various schools and majors to continue to collaborate and contribute. This strengthens the reliability and value of services and communities.
